LAB REPORT

Course Code

CSE 4112

Course Title

Compiler Design Sessional

Submitted By:

Himel Sarder

ID: 22111121

Session: 2021-2022

Department of Computer Science and
Engineering
Jamalpur Science and Technology
University, Jamalpur.

Submitted To:

Md. Sydur Rahman

Lecturer

INDEX

SL No	Titles	Page
00	Procedure of IDE Setup and Execution	02
01	1. Binary Search Using C++ with Debugging Techniques.	06
	2. Selection Sort Using C++ with Debugging Techniques	08
	3. Matrix Multiplication Using C++ with Debugging Techniques	10
02	Checking the Validity of an Input String Using C++ with Debugging Techniques	12
03	Checking Whether an Input String is a Single-Line Comment, Multi-Line Comment, or Not a Comment Using C++ with Debugging Techniques	14
04	Checking Left Recursion in a Context-Free Grammar Using C++ with Debugging Techniques	16
05	String Tokenization Using C++ with Debugging Techniques	18

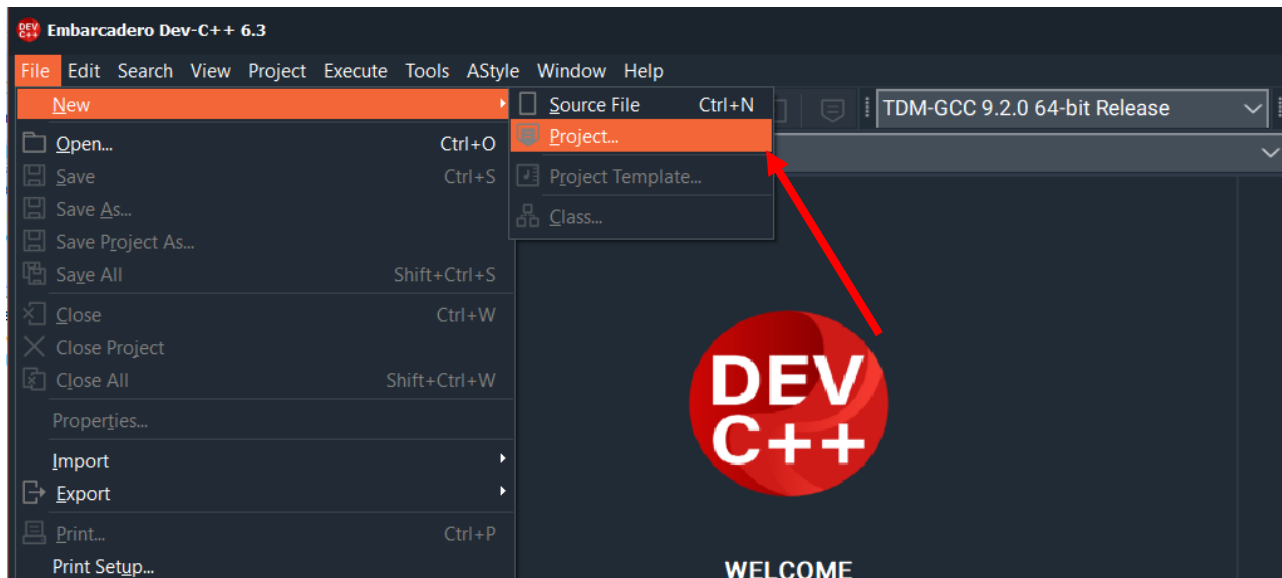

Procedure of IDE Setup and Execution

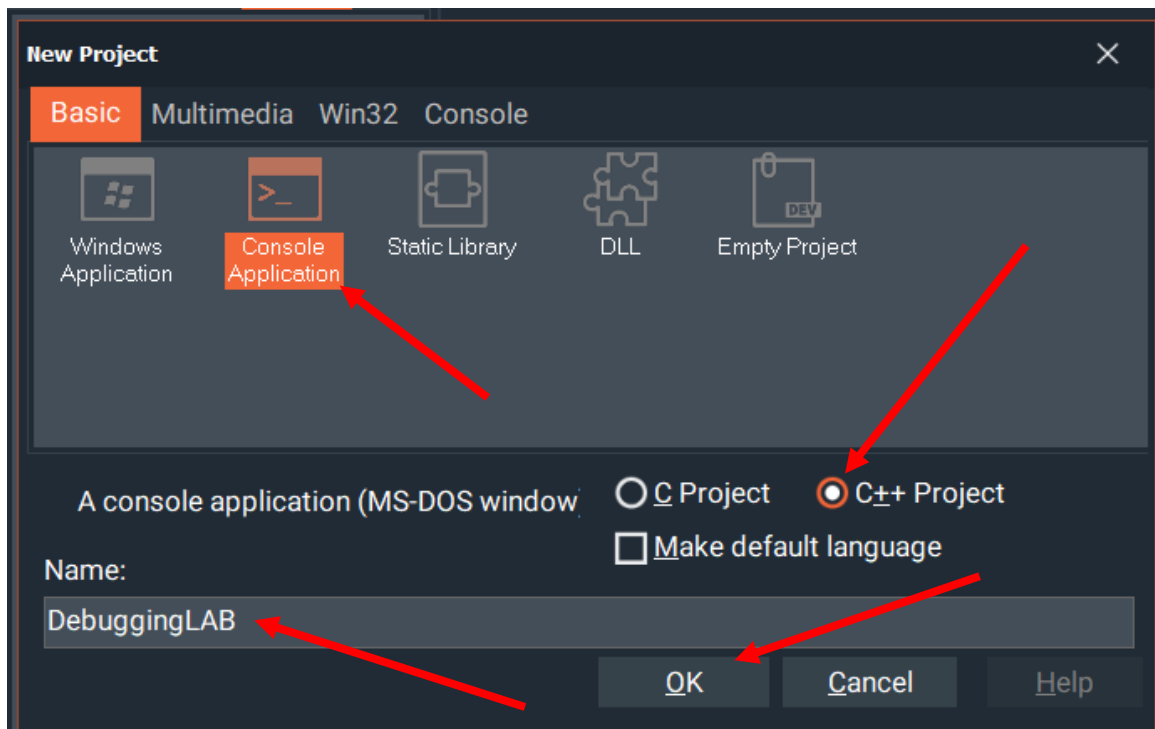

1. Open Integrated Development Environment (IDE)

Open Embarcadero Dev-C++ (Similar to Codeblocks but better debugging facilities).

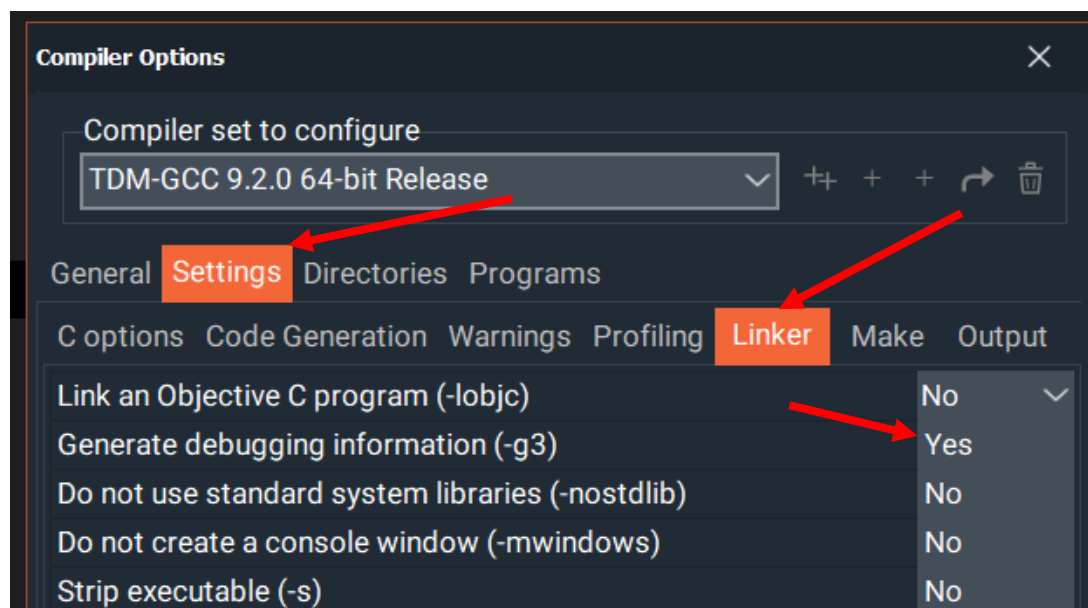

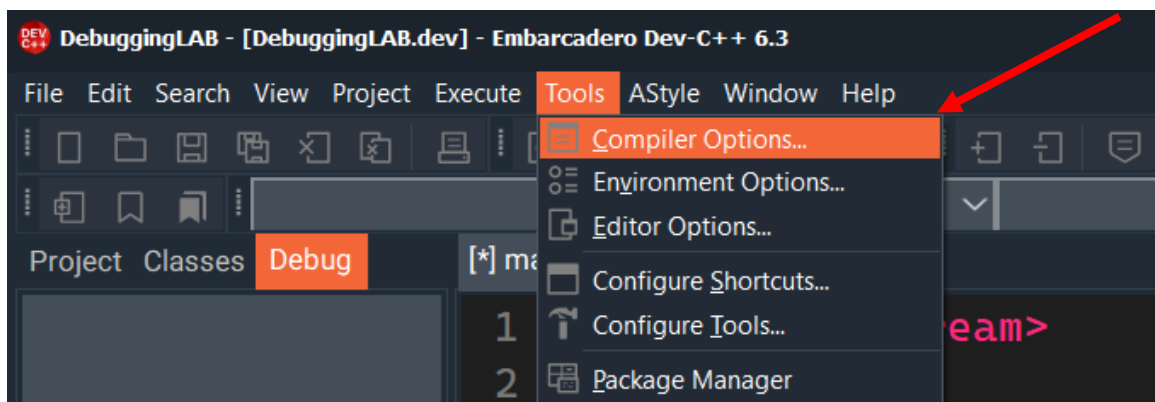

2. Create new Console Application project

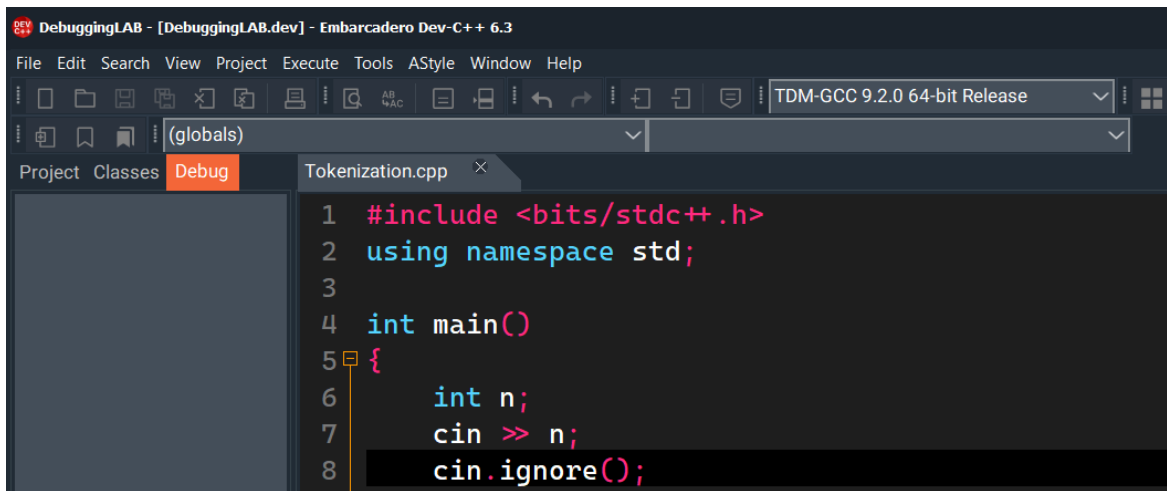

3. Configure the Compiler

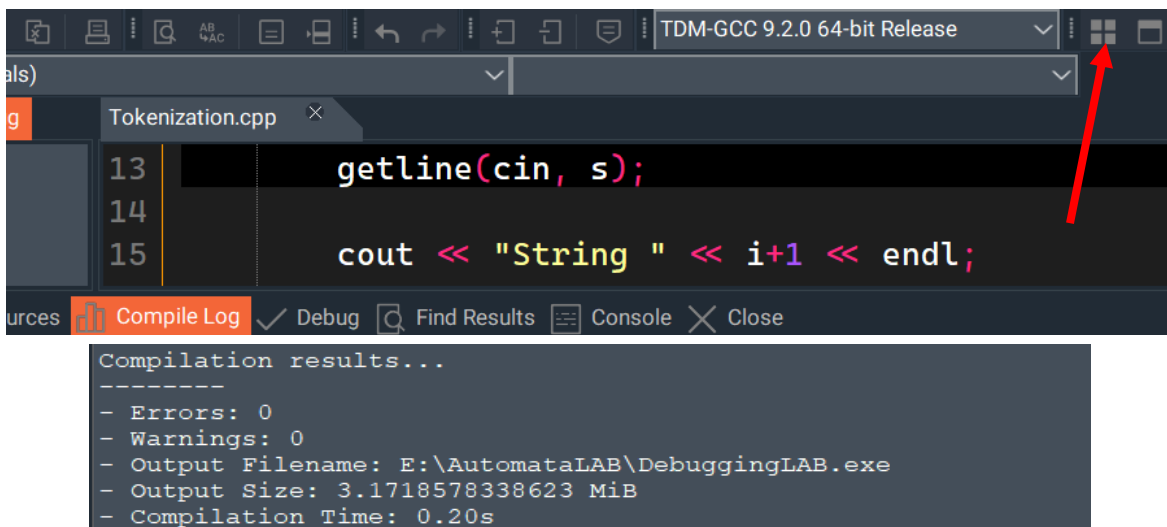

4. Write codes and Save it.

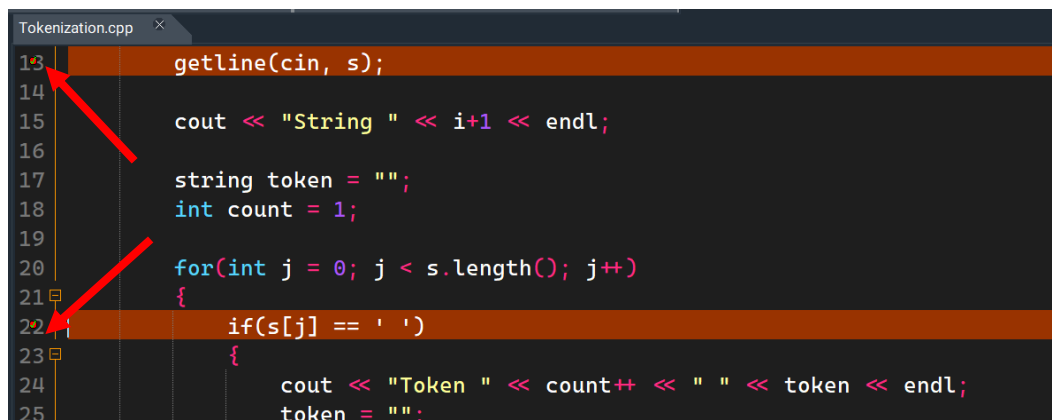

5. Compile the program

Ensure that the program compiles successfully without errors.

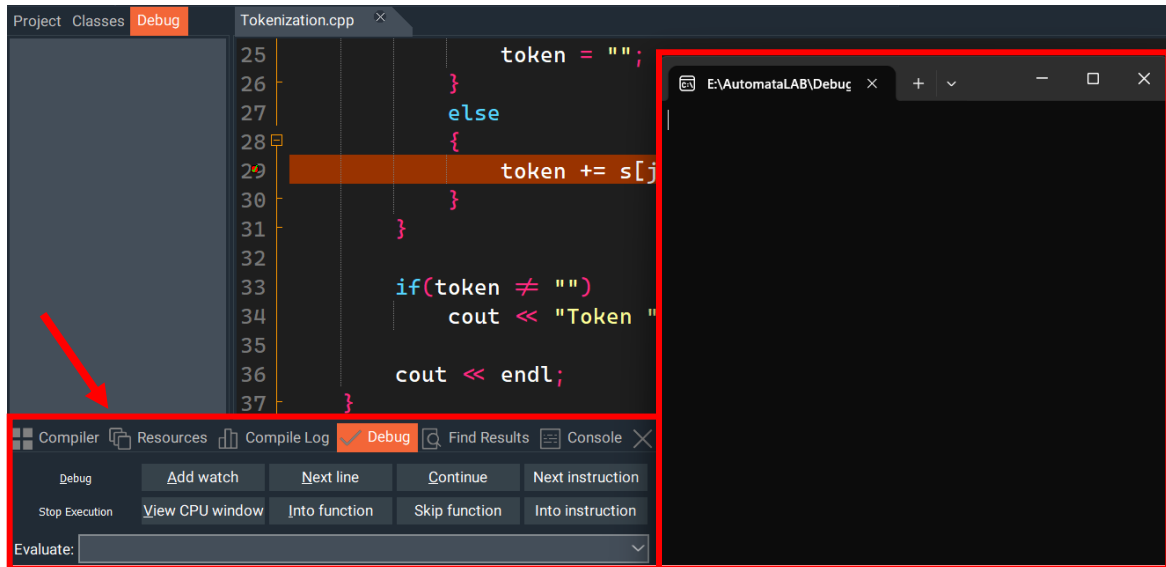

6. Add breakpoints

- Click on the left margin beside the desired line number.
- A red dot appears, indicating that a breakpoint has been added.

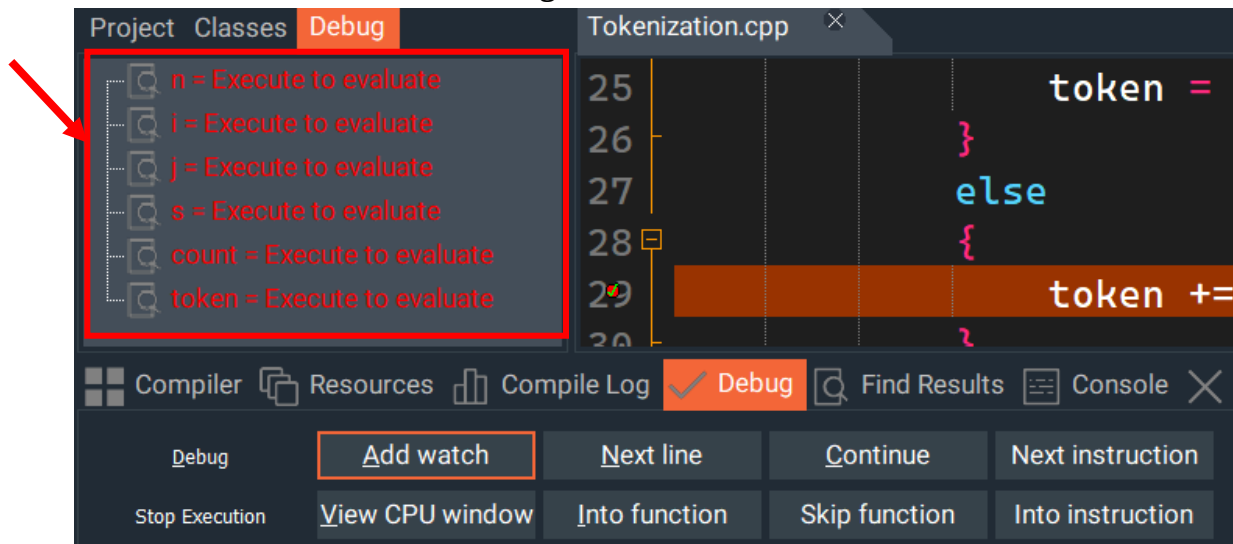

7. Run debugger.

A terminal will open and debugging console will appear at the bottom.

8. Add Watch to track variables value changes

9. Execute program

Execute program with next line, Give input and see watch.
